INTRODUCTION

This report presents tabulations of family expenditure in Canada obtained from a survey carried out in January, February and March, 1970 and refers to the calendar year 1969. These tabulations are designed to show patterns of expenditure for families and unattached individuals in each of the five regions of Canada, classified by selected characteristics such as, urbanization size class, family type, family life cycle, family income, class of tenure and age of head.

For brevity, as well as reliability, these regional tables of Canada reflect rather more the requirement of adequate within class sample sizes, than that of obtaining relatively homogeneous groupings of families. The degree of cross-classification has been confined to providing a few tables for urban and rural families separately. The grouping of the smaller provinces into regions, represents a compromise between adequate within class sample sizes and providing some information on the variation in expenditure patterns across Canada. The need for information referring specifically to the smaller provinces is covered only by a set of tabulations showing patterns of expenditure by family income quintiles, and also a set of tabulations by an abbreviated family type classification.

There will be four volumes, including the present volume, published under the general title "Family Expenditure in Canada, 1969" - a brief description of each is given on back cover. These four volumes relating to the full budget will supplement information derived from a survey of family food expenditure in Canada conducted throughout 1969. For that survey, monthly samples of approximately 1,300 families and unattached individuals were asked to keep records, of food and selected non-food purchases, for two consecutive weeks. The open-book diary was used on which respondents recorded, by item, expenditures and quantities. The results from the food survey are published in two volumes "Family Food Expenditure in Canada, 1969" volumes I and II (Catalogue Nos. 62-531 and 62-532).

There are a few differences of coverage in the presentation of tabulations from the two 1969 surveys, which should be considered when making comparisons. Boarding families and unattached individuals are excluded only from the food survey tabulations, while the exclusion of part-year spending units apply only to tabulations from the full budget survey. These differences largely account for the relatively fewer unattached individuals shown for the food survey. A further consideration is to note that while family income in the full budget survey referred to calendar year 1969, for the food survey it referred to the previous twelve months for each monthly sample and thus to varying periods between calendar years 1968 and 1969.

The 1969 survey is the first family expenditure survey of national scope since 1948 and was designed to provide information for families and unattached individuals living in private households in all areas of Canada, both urban and rural, except Yukon and the Northwest Territories. Similar surveys conducted during the past twenty years by Statistics Canada (Dominion Bureau of Statistics) have varied in coverage from middle-income families in a few major cities to all families and individuals in urban centres of 15,000 and over. In no case have they covered the small urban and rural population.

The 1948 survey response provided effective coverage only for the non-farm population, and even in respect to this provided fewer than 4,000 usable records. The only substantial post-war coverage of farm family living expenditures was provided in the comprehensive survey of farm income and expenditure undertaken by Statistics Canada, (Dominion Bureau of Statistics) jointly with the Department of Agriculture in 1958. The number of usable farm family records obtained in 1969 is one third of that obtained in the 1958 survey, and will permit comparisons for farm families in broad terms only.

SAMPLE DESIGN AND SELECTION

The sample was selected within the framework of the Labour Force area sample. Households were chosen by systematic random sampling from a list of households. A full Labour Force sample was set aside from which a sub-sample was drawn for this particular survey. Contrary to practice in earlier surveys, therefore, the sample was not drawn from a group of households which had been previously included in the Labour Force survey.

The allocation of the sample represented a compromise between samples proportional to population and equal samples. Montreal and Toronto were assigned samples larger than other cities, because of their importance in the Canada average. However, the smaller cities were given larger samples than their importance in the Canada average warranted in order to meet the need for reliable city estimates. In the same way, samples for small urban, rural non-farm and farm were drawn to provide reliable provincial or, at least, regional estimates. In compiling composite estimates, records were weighted to restore to each geographic area its due importance in the total, thus compensating for variable response rates between areas as well as variable sampling rates.

SURVEY METHODS AND RELIABILITY OF RESULTS

Survey Methods

The 1969 survey was conducted in the same manner as earlier surveys of family expenditure. The enumerator was first required to list all members of the household and to determine the spending units which comprised the household. The enumerator then completed an expenditure record for each spending unit, recording the information on a detailed schedule.

The collection of expenditures by recall and reference to records for the previous year imposes a considerable task on both the interviewer and the respondent, necessitating lengthy interviews and frequently more than one visit in order to obtain complete information. It is considered that the calendar year provides boundaries which are apt to be more clearly defined in the respondent's mind than any other twelve-month period. Purchases of large items, automobiles, chesterfield suites, etc., may be recalled fairly readily. This is also the case with rent, property taxes and monthly payments on mortgages. Food expenditure, which comprises almost one quarter of the average budget, can be estimated in terms of weekly or monthly expense. Expenses on smaller items, which are purchased at regular intervals, are usually estimated on the basis of amount and frequency of purchase. The accuracy of other family expenditures, such as those for clothing, depends upon the ability of the respondent to remember individual purchases at a considerable level of detail.

Survey Processing

Editing was carried out in several stages. The preliminary edit in the regional office was mainly for completeness, so that, if necessary, a schedule could be returned for further information.

This was the fourth survey in the series to be processed by computer. The manual editing carried out in head office comprised (1) a review of each schedule for consistency and correct location of items; (2) coding a limited number of items which were reported non-numerically; (3) performing certain adjustments on reported information and (4) reviewing the balancing check. The computer edit performed a variety of consistency checks including the balancing check, and formed the basis of further clerical editing and correction of incorrect entries on tape. Records identified by the computer as being outside the ten per cent limit were submitted to a final appraisal to determine whether they should be accepted or deleted. Experience has indicated that in this type of survey too much reliance on a mechanical edit could be as time-consuming as a more complete manual edit, and that, in fact, the identification and correction of errors at this stage demanded much more care on the part of the clerical staff.

Response Errors and Sampling Error

Errors in sample surveys can be divided into two main types, errors of response, and sampling errors. Errors of response may be due to inaccurate answers or incomplete information. The latter may be the fault of the design of the schedule, faulty questioning by the enumerator, refusal of the respondent to co-operate, or failure to locate some families.

In addition, all samples are subject to sampling error, which arises from the fact that only a portion of the universe is observed. Sampling error is related to the size and efficiency of the sample; the frequency of reporting the item and the variation in expenditures on the item. In general, smaller relative sampling errors are associated with groups of items which are reported by the majority of families, such as totals for food, clothing, household operation, personal care supplies, and medical care. The largest sampling errors occur in individual items infrequently purchased such as major durables or air travel; or groups of items on which the percentage of families reporting expenditure was relatively low. In the detailed tables of this report the percentage of families reporting is shown for each item beside the average expenditure per family.

Reference has already been made in the foregoing sections on survey methods and survey processing to the balancing check which is performed on individual schedules. For the third time in this series of reports, the account-balancing difference is published. It forms part of the data accompanying each detailed expenditure table. For a given group of families, the account-balancing difference represents the average net amount, either positive or negative, by which the schedules comprising the group were not in balance. A positive account-balancing difference indicates an excess of income, other money receipts and debit items of financial change (decrease in assets and increase in liabilities) over expenditures and credit items of financial change (increase in assets and decrease in liabilities). A negative account-balancing difference indicates the reverse, an excess of expenditure and credit items.

It should be noted that the "allowable" balancing difference, which served as an error signal was ten per cent of total receipts or disbursements, whichever was larger. This method allowed a greater margin of error to families who had substantial changes in assets and liabilities, such as the sale or purchase of a home.

ELIGIBILITY CRITERIA AND SAMPLE RESPONSE

Of the sample of 24,606 dwellings, only 21,978 were actually occupied. These contained 22,634 spending units of whom 276 were ineligible.

Eligibility Criteria

Although no eligibility criteria of income or family composition were applied, there were certain conditions under which spending units were not eligible. Spending units who were families of official representatives of foreign countries living in Canada were excluded, as were families (or individuals) living full-time in institutions. In the sample 276 spending units were ineligible on these criteria and were excluded by definition in field operations.

Sample Response

Out of the estimated 21,887 eligible spending units, excluding those known to be part-year 15,140 families and individuals provided usable schedules for a full year. The overall response rate was 69.2 per cent. Of the estimated 6,747 spending units from whom a completed usable schedule was not obtained, 1,645 were non-contacts, and 4,661 either refused to co-operate or did not provide complete information. A further 441 family schedules were rejected at the editing stage as being too far out of balance to be usable.

The response rates varied by region with an average of 69.2 per cent in the Atlantic Provinces, 72.8 per cent in Quebec, 65.1 per cent in Ontario, 73.1 per cent in the Prairie Provinces and 63.9 per cent in British Columbia. For the eleven major regional urban centres, the response rate averaged 67.7 per cent, which is a little lower than the 68.9 per cent obtained in the 1967 survey.

The excluded part-year spending units comprised families and individuals who had immigrated to Canada during the survey year, units formed by marriage during the year of persons who had both been members of existing spending units previous to their marriage, and other families and individuals who became independent spending units during the survey year. There were 471 schedules obtained from families and individuals who existed as spending units only part of the year; of these 369 appeared to be complete for the part of the year to which they referred.

As in past surveys, part-year units have been excluded from tabulations of average expenditure per family, because of the irregular time periods covered and because their inclusion would have rendered family groups less homogeneous and the averages less specific. The fourth volume in this series will include estimates of the effect of part-year families on aggregate expenditures.

In the foregoing response calculations for full-year spending units, part-year units have been excluded as if they were ineligible. Their inclusion in response calculations would have raised the overall response fractionally from 69.2 to 69.4, but this difference possibly reflects the less rigorous criteria for acceptability which could be applied, rather than an improvement in response.

PRESENTATION OF SURVEY RESULTS

The tables in this report represent a selection from a considerably larger number of detailed tables. In Tables 1 to 65 inclusive, patterns of family expenditure for the total sample of families and one-person spending units and families of two or more are presented for each region, classified by important family characteristics. Tables 66 to 85 inclusive present similar information for each province classified by family type and family income quintile groups.

Tables 86 to 90 provide full expenditure detail for the patterns presented in Tables 6, 19, 32, 45 and 58 respectively. Information is in the form of average expenditure per family and percentage of families reporting. Average expenditure per person may be derived by dividing average per family by average family size. The average expenditure per family reporting on a given item can be derived by the following calculation:

$$\frac{\text{Average expenditure per family}}{\text{Percentage of families reporting}} \times 100$$

Complete expenditure detail is available for all classifications shown in Tables 1 to 85 except family life cycle and abbreviated age of head, and can also be obtained for some classifications not shown in this report.

NOTES AND DEFINITIONS

Coverage. — The sample of families and unattached individuals was designed to reflect all areas of Canada, both urban and rural, except Yukon and the Northwest Territories. It refers to families and individuals living in private households but excludes those living in collective households such as hospitals and military establishments.

Also excluded, in deriving average per family expenditures, were part-year spending units. These comprised families and individuals who had immigrated to Canada during the survey year; units formed by marriage, during the year, of persons who had both been members of existing spending units previous to their marriage; and other families and individuals who became independent spending units during the survey year. Some consideration of part-year spending units will be made in Volume IV in connection with aggregate expenditure.

I. Family and Family Characteristics

Family. — The family or spending unit is defined as a group of persons dependent on a common or pooled income for the major items of expense and living in the same dwelling or one financially independent individual living alone. Never-married sons or daughters living with their parents are considered as part of their parents' spending unit. In the great majority of cases the members of spending units of two or more are related by blood, marriage or adoption, and are thus consistent with the "economic family" definition employed in surveys of family income, "a group of individuals sharing a common dwelling unit and related by blood, marriage or adoption". The definition of family employed by the population census restricts the family to husband, wife and any unmarried children living with them, or one parent and unmarried children. Individual or one-person spending units are financially independent persons living alone or as roomers.

It should be noted that according to the "economic family" definition, unrelated persons living in the same household would be counted as unattached individuals, whereas in the expenditure survey it is possible for two or more unrelated persons to comprise one spending unit.

Family head. — In husband-wife families, the husband was considered as head. In one-parent families with unmarried sons or daughters, the parent was considered head. In all other types of spending units, the head was the person mainly responsible for the maintenance of the spending unit.

Age of family members. — In all cases the age referred to was the age at December 31, 1969, in other words the age attained at the 1969 birthday.

Adult. — Person 16 years of age or over at December 31, 1969.

Child. — Person under 16 years of age at December 31, 1969.

Family type. — Defines the family in terms of numbers of adults and children.

Family life cycle. — This classification groups spending units into three major categories: (1) unattached individuals, (2) married-couple families, with or without unmarried children, but no other persons, (3) other families, which include married couples with relatives other than unmarried children, single-parent families and other families of relatives or non-relatives. The married-couple families of the second category are further classified by age of head (under 45; 45-64; 65 and over) and by the presence or absence of children within specific age groups. The unattached individuals are also classified by age.

Full-time earner. - Any person employed for 48 weeks or more on a full-day basis.

Employment status of wife. - Refers to number of weeks worked within the survey year including holidays with pay, with a distinction made between full-day and part-day employment. Full-time employment refers to employment of 48 weeks or more working full-day. Part-time employment refers to employment from one to 47 weeks working full-day or any number of weeks part-day. No wife of head refers to families other than husband-wife families and includes families where the head was a female.

Homeowner. - Refers to families living in a dwelling (either with or without mortgage) owned for the entire survey year by a member of the spending unit.

Car owner. - Refers to families owning a car at December 31, 1969.

Occupation of head. - Based upon the Standard Occupational Classification published by the Dominion Bureau of Statistics, - now Statistics Canada, April 1961.

Region. - Refers to a contiguous grouping of the Provinces. Quebec, Ontario and British Columbia are shown separately as Regions, but Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are grouped to form the Atlantic Region and Manitoba, Saskatchewan and Alberta form the Prairie Region.

Urbanization Size Group. - Families and unattached individuals living in cities, towns and villages with population of 1,000 or over, whether incorporated or not, and including urbanized fringes are classed as urban. All others are classed as rural. In some tabulations a distinction is made between families and unattached individuals living in urban centres with populations of 1,000 to 29,999; 30,000 to 99,999; 100,000 to 499,999; and 500,000 and over, or some combination of these. Families and unattached individuals living in dwellings situated on farms in rural localities are referred to as rural farm. A farm, following the 1966 census definition, was a holding of one or more acres with sales of agricultural products of \$50 or more per annum. This would include, therefore, families whose income is derived largely from non-farming operations, but excludes farm operators and their families who do not live on their holdings. Special areas refer to separate private dwellings within institutions such as hospitals and military establishments and also dwellings in designated remote areas. Note that all urban, all rural and special areas combined are referred to as all urbanization classes.

Country of origin. - Refers to country where family head was born. Other North European includes those born in Denmark, Finland, Iceland, Norway, Republic of Ireland and Sweden. Other West European includes those born in Austria, Belgium, France, Luxembourg, Netherlands and Switzerland. Other South European includes those born in Greece, Malta, Portugal, Spain, Yugoslavia and Albania. Other East European includes those born in Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Roumania and Russia. Asia includes those born in Ceylon, China, India, Iran, Israel, Japan, Lebanon, Pakistan, Philippines, Syria and Turkey. Australasia includes those born in Australia and New Zealand.

II. Income, Expenditure and Other Financial Items

Money income. - Included: (1) Employment income i.e. gross income from wages and salaries; net income before taxes from self-employment; and receipts from military pay and allowances. (2) Other income i.e. gross receipts from roomers and boarders; net rentals; family allowances; interest and dividends; all pensions; workmen's compensation and unemployment insurance benefits; regular receipts from insurance policies and annuities; and miscellaneous regular income receipts.

Other money receipts. - Reported but not included in income, comprised inheritances; bequests; lump sum settlements from property insurance, accident and health policies; and irregular gifts from outside the family.

Source of income. - Wages and salaries comprised employment income including military pay and allowances and salary paid to owner of incorporated business. Income from self-employment included net profit to proprietor or partner of unincorporated business or farm also gross income from roomers and boarders. Investment income included interest and dividends, net rents on owned property, trust and estate income. Government transfer income included family allowances, unemployment insurance, veterans' and old age pensions including those under the Canada or Quebec Pension Plan. Miscellaneous income included pensions arising out of previous employment, individually purchased annuities, and other money income.

Major source of income. - A source is classified as major, for a particular family or unattached individual, if it provides the largest source of income to that family.

Expenditures for current consumption. - Included expenses incurred during the survey year for food, housing, fuel, light and water; household operations; clothing; automobile purchase and operation; other transportation; medical care; personal care; reading; recreation; education; smoking and alcoholic drinks and a miscellaneous group. - Consumer durables such as automobiles and household equipment were considered as consumption items, but changes in equity, purchases and sales of homes were considered as changes in assets and liabilities. Family expenditures for items used partially for business, such as home or cars, were adjusted to exclude the amount chargeable to business use. Sales, excise, automobile and real estate taxes were included as part of consumption expenditure for the commodity or service to which these taxes applied.

Food prepared at home. - All food purchased to be served at home or carried away from home in lunches, including cost of food served to boarders.

Rent. - The net family expense for contract rent after adjustment for any use of the dwelling for business. There was, however, no adjustment in rent for partial sub-letting to roomers or boarders.

Fire insurance. - Premiums paid on policies for fire and comprehensive policies. Amounts paid in premiums covering more than the survey year were not pro-rated.

Housing repairs. - Amount spent for labour and materials for all types of repairs and maintenance. Costs of improvements (such as added rooms, garages, etc.) which are considered increases in assets, were not included.

Repair materials. - Cost of materials purchased separately by family.

Repairs-contract cost. - Included both cost of materials and the labour for repair jobs done by professional building craftsmen.

Mortgage interest. - Was calculated on the basis of the terms of the individual homeowner's mortgage contract. The mortgage principal repayments in the survey year were not considered as expenses, and hence they were not included in either shelter costs or total expenditure, but counted as increases in assets.

Other owner expenses. - Included real estate commissions, lawyers' fees connected with home ownership, and mortgage insurance fees and premiums.

Gas. - Delivered in mains, by tank truck or in containers.

Other heating costs. - Included such things as payments for central community heating and rental of heating equipment.

Household moving expenses. - Did not include trailer or truck rental for purposes of moving.

Other non-electric kitchen equipment. - Included wooden utensils, canning materials and jars.

Other electric kitchen equipment. - Included can openers, electric knives, etc.

Other electrical equipment. - Included heating pads, vaporizer, electric clocks, etc.

Other household textiles. - Included mattress covers, runners, etc.

Car purchase. - Was net of trade-in allowance (or sale) and discount. It included the purchase price of the automobile, extra equipment and accessories bought when the car was purchased.

Car operation. - Where the car was used for both business and family use the car operation expenditures were adjusted to account only for family use.

Other (boat, steamship, ferries etc.). - Included pleasure cruises but excluded boat passage as part of a package tour (see recreation).

Physician's care, etc. - Physician's care, eye care, dental care, hospital care, nursing care, etc. referred only to expenditures made by the family on that portion of the health services not covered by the prepaid plan(s) held by the family.

Net change in assets and liabilities. - Referred to net changes during the survey year in assets such as bank accounts, money on hand, money owed to the family, stocks and bonds (excluding change in market value), sale of personal property, investment in real estate and business investments along with net changes during the survey year in liabilities such as, notes due to banks, loan and insurance companies, etc., instalment purchases, charge accounts and other bills, rents and taxes. If on balance a family dissaved, i.e. if credits (net increase in assets and net decrease in liabilities) were exceeded by debits (net increase in liabilities and net decrease in assets) then, this would result in a negative figure(-).

III. Technical Definitions

Number of families in population. - These are estimates of the total number of families and unattached individuals living in private households, at the end of 1969, in a specific class. They are aggregates of the figures used in the weighting of records in each class and should be used in combining classes.

Weighting of records. - Records were weighted to restore to each geographic area its due importance in the total, thus compensating for variable response rates between areas as well as variable sampling ratios. Estimates were made of the total number of families and unattached individuals living in private households, at the end of 1969, for each of a number of specific geographic areas in Canada. Allowances have been made for changes since the 1966 census, but although estimates, particularly of changes within Provinces, are subject to error, it is unlikely that this has significantly biased the calculated average expenditure figures.

Family size. - Family size or "year-equivalent persons" was computed by dividing the total number of weeks during which family members belonged to the unit in the survey year by 52 weeks. In this way, part-year members were counted as fractions of a year-equivalent person.

Average per family. - The averages were based on all families in each class, whether or not they reported purchases of a particular item. Averages were calculated by dividing the aggregate amount of income or expenditure in a given class by the total number of families in the class. Because all averages for a class are obtained by a common divisor they are additive.

Percentage reporting. - Percentage reporting was obtained by dividing the number of families reporting the specified item of income, or expenditure, by the total number of families in the class. Average amounts for families reporting a specified item can be developed from this by dividing the average dollar expenditure by the proportion reporting.

Percentage distribution. - The expenditure on a specified item of expenditure was expressed as a percentage of total expenditure.

TABLE 1 CANADA 1969

PATTERNS OF EXPENDITURE BY FAMILY TYPE

(1) THE RECORD OF A FAMILY AT THE UPPER BOUND OF THE FIRST FOUR QUINTILE GROUPS IS DUPLICATED AND ITS WEIGHT APPROPRIATELY DIVIDED BETWEEN THE ADJACENT GROUPS. THIS WILL NOT AFFECT THE AGGREGATE WEIGHT (NUMBER OF FAMILIES IN THE POPULATION) BUT WILL INCREASE THE COUNT OF THE NUMBER OF FAMILIES IN THE SAMPLE BY 4.

RECENT PUBLICATIONS -- Concluded

62-537 Volume III -- "Major Urban Centres" English and French

Shows patterns of expenditure for the same eleven major regional cities covered in "Urban Family Expenditure 1967", classified mainly by the same family characteristics as in Volume II.

62-538 Volume IV -- "The Analysis of Family Expenditure" English and French

Covers the conventional analytical discussion of the tabulations and of the discernible relationships between family expenditures and characteristics of the family identified in the study. These relationships are illustrated by tables, charts and multiple regression equations. The discussion also includes a study of non-response and sampling errors.

RECENT PUBLICATIONS

Family Expenditure Surveys

Occasional

Catalogue number

- 62-524 Urban Family Food Expenditure, 1962. Bil. 79 pp.

Results from a series of monthly surveys of family food expenditure conducted in seven cities throughout 1962 and referring to families of specified types in the size range two to six persons, with incomes ranging from \$3,000 to \$7,500. Statistics are in the form of average dollar expenditures per family and per person and percentage of families reporting for about 150 food items. Additional material is included concerning attributes of survey families, response and reliability of survey results.

- 62-525 Urban Family Expenditure, 1962. 126 pp.

The fifth in a series of small sample surveys of family expenditure in major urban centres. Expenditure patterns by family characteristics for 1,070 families of two to six persons with family income ranging from \$3,000 to \$8,000 in seven cities. Detailed expenditure for families classified by city, income level, family type and age of head

- 62-527 Urban Family Expenditure, 1964. 140 pp.

The sixth in a series of small sample surveys of family expenditure in major urban centres. Expenditure patterns by family characteristics for 2,034 families and unattached individuals in eleven cities. Detailed expenditure for families and unattached individuals, classified by city, income level, family type and age of head.

- 62-530 Urban Family Expenditure, 1967. 160 pp.

The seventh in a series of small sample surveys of family expenditure in major urban centres. Expenditure patterns by family characteristics for 2,096 families and unattached individuals in eleven cities. Detailed expenditure for families and unattached individuals, classified by city, income level, family type and age of head.

- 62-531 Family Food Expenditure in Canada 1969 Volume I. Bil. 208 pp.

Detailed information on family food purchases recorded by a sample of 10,022 Canadian families and individuals in 1969. Average expenditures and quantities per family and per person are presented by commodity for Canada and five regions (Atlantic Provinces, Quebec, Ontario, Prairies, British Columbia), cross-classified according to location in urban centres of 30,000 and over, smaller urban centres, rural areas and for Canada rural non-farm and farm.

- 62-532 Family Food Expenditure in Canada 1969 Volume II. Bil. 127 pp.

Shows tables of patterns of expenditure and summaries of expenditure for main commodity groups for Canada as a whole and for five regions (Atlantic, Quebec, Ontario, Prairies and British Columbia) mainly for the non-farm population cross-classified by various family characteristics such as family type, family income, family life cycle.

Publications under the general title of "Family Expenditure in Canada, 1969" are:

- 62-535 Volume I - "All Canada: Urban & Rural" English and French

Shows patterns of expenditure for Canada as a whole by selected characteristics such as urbanization size class, family type, family life cycle, family income, age of head, tenure, occupation of head, education of head, country of origin and immigrant arrival year. These are, mainly, shown separately for urban and rural areas.

- 62-536 Volume II - "Regions" English and French

Shows patterns of expenditure for each of five broad regions of Canada: Atlantic Provinces, Quebec, Ontario, Prairie Provinces and British Columbia. Each region is shown for selected characteristics such as urbanization size, family type, family life cycle, family income, age of head and tenure. Although separate tabulations for the smaller provinces are not generally available for these characteristics, two sets of tables by province are given in this volume, they are respectively by family income quintiles and by an abbreviated family type.
